EXPERIENCE

Spring Health / *Software Engineer I*

AUG 2024 - PRESENT

Technologies used: React, TypeScript, Ruby on Rails, GraphQL, Python

- Added notifications and a noise filter to a video communications tool, contributing to a project that helped save ~\$90,000 per month
- Built migrations and models for integration with external appointment-scheduling APIs
- Crafted dozens of components for the component library and front-end repositories, solving accessibility errors across 10+ webpages and streamlining other developers' work
- Built internal UI for telephony configurations for domestic and international customers, saving 10+ hours of manual labor per month for internal operations teams
- Created an A/B test mood tracker calendar that pulled and sent user mood data to the back-end and displayed it in a one-week and two-week view, resulting in \$10,000+ in revenue
- Added provider filters for cultural backgrounds to help close a potential client and improve the user's experience in selecting a therapist
- Migrated Neurodiversity page onto updated front-end foundation, making it easier to maintain
- Created a tool that mapped 5,000+ user events to descriptions of those events, aiding cross-functional collaboration in user flow analysis
- Built an internal tool that mapped component dependencies and logged metadata that enabled multiple teams to track engineer responsibility for given files
- Added Gujarati, Telugu, and other languages to the site, which maintained international customers

Spring Health / *Software Engineer Intern*

JUN 2024 - AUG 2024

Technologies used: React, TypeScript, Ruby on Rails

- Implemented logging for 90 events to streamline troubleshooting when users encountered errors
- Fixed 15 accessibility errors to improve the experience of users utilizing screen readers
- Identified and wrote tickets for 20+ bugs, helping to solve accessibility and UI errors

EDUCATION

Rutgers University / *School of Arts & Sciences*

SEP 2021 - JAN 2025

- Bachelor of Arts in Computer Science; minors in American Studies and Political Science

PROJECTS

The Common News / *Software Engineer*

[Website](#)

Technologies used: Next.js, Vite, Tailwind CSS

- Implemented lint and test workflows that flagged issues in PRs during commit and review
- Fixed search functionality for unauthenticated users on the [web app](#)
- Architected and built part of the [public API](#)

Rutgers RUMobile / *Software Engineer*

[App Store](#) (4.8 ☆)

Technologies used: React Native, React Native Testing Library

- Built 20+ components to display food details and profiles, welcome users, and more
- Improved product quality by increasing test coverage by 12%
